**MID Certification
CE capacity measure marked cups
(Directive 2014/32 UE)**

The MID Management System

The European Directive 2014/32 UE MID (Measurement Instrument Directive) of Feb 26, 2014 considers a drinking cup as a capacity measure. This is marked with a line indicating the exact volume of the liquid inside the drinking cup.

It's important to have that marked line to ensure capacity only in case the drinking cup is used for measuring, selling drinks by the volume.

This certification (MID), obtained by Medac's Quality System and approved by the Notified Body CE n° 1273, guarantees the capacity of the measuring tools (cups for cold/hot drinks) manufactured by Medac.

According to the requirements, it is obligatory to:

- 1) Mark with the initials/acronym CE and the capacity, together with the certification number, all within a box.
- 2) Print the name Medac or the company logo at the bottom of the cup. The manufacturer is the only responsible for the exact capacity measure.
