

## Medac

Regulation 2023/06/CE  
On Good Manufacturing Practice for materials and articles  
intended to come into contact with food.

### GMP Management System

GMP (**Good Manufacturing Practice**) lays down the rules on good manufacturing for materials and articles which are intended to come into contact with food.

This regulation ensures:

- finished products made safe through appropriate testing to avoid any danger for human health.
- safety and hygiene of the materials intended to come into contact with food.
- preservation of the organoleptic characteristics of the food with which the articles will come into contact.

Medac ensures full compliance of its products with the above described rules through the application of good practice procedures.
