**Aticelca Certification**  
**(Aticelca 501/2019 Method)**

**Aticelca Certification**

The ATICELCA 501/2019 is an Italian analytical method adopted by Medac, which permits by laboratory analysis to simulate the same conditions used by paper mills to recycle, so allows you to measure the level of recyclability of any product made of paper or cardboard.

The test result is summarized by an index expressed by the letters A +, A, B and C, with A + being the level of highest recyclability. Based on the results of these tests, Medac products are certified Level A and B that means that are recyclable as paper and have a percentage of waste between the 10-20%.

Aticelca is the Association which brings together technicians and experts who work in the paper industry.
