

Environmental Policy

medac®
S.r.l.

Medac's focus on the environment comes from becoming aware of the inescapable need to establish a sustainable balance between the production processes and the surrounding environment.

Awareness to environmental topics has always been inherent in the Medac conduct. Experiences in paper recycling / oils / ferrous materials / packaging, etc. have been part of everyday production for years.

The company management has adopted an environmental management system with reference to the international standard UNI EN ISO 14001, committing:

- to identify the stakeholders determining the needs and expectations that have become internal compliance commitment,
- compliance with all applicable legal regulations and other requirements / commitments signed by Medac in relation to the environment,
- the continuous improvement and prevention of pollution, through the control of the energy used, the containment of emissions into the atmosphere, and the identification of the life cycle of its products, in order to avoid the involuntary displacement of its environmental impacts,
- designation for the control and implementation of the environmental management system,
- the continuous updating of the personnel on the best practices that can be adopted in relation to the expected results.
- the definition of objective and quantified environmental objectives and targets.

These results can only be achieved with the creation of a system for measuring the parameters that influence the environment that allows, with clarity and timeliness to identify and quantify the dangers (potential or real) and implement the improvement actions.

Medac S.r.l.
