**Packaging - Requirements for packaging recoverable
through composting and biodegradation
(EN 13432:2002)**

OK Compost certification

The standard EN 13432 describes the requirements for compostable packaging.

The four specific requirements are:

- **Biodegradability**, which is the compatibility of the compostable materials to be converted into CO₂.
- **Disintegrability**, which is the fragmentation and loss of visibility in the final compost.
- **Absence of negative effects** on the composting process.
- **Low levels** of heavy metals.

The certification named "OK Compost" was released by TÜV AUSTRIA, an independent international certification body.

The logo "OK Compost" on Medac's products guarantees the biodegradability and the compostability of all the elements used.
